

Turbo Passwords™

In this age of digital technology, much of life's daily activities are performed on-line. Because of this, people have secret passwords too numerous to remember, but too important to forget. The solution is TurboPasswords software. More than just a password manager, TurboPasswords is the safe, simple, organized and convenient private information manager.

Reduce the chaos in your head and the clutter on your desk. Keeping personal identification information safe and at your fingertips is easy with TurboPasswords.

Remember one password for TurboPasswords and forget the rest! Store passwords, PINs, account numbers and more in TurboPasswords and quickly access them when you need them. They will be there. Safe and secure. Ready to help you log in faster to your favorite Web sites, provide credit card information for on-line purchases, give frequent traveler account numbers when making reservations, and much more!

Highlights

Simple. Clean, intuitive interface makes it easy to enter data and find the information you need, when you need it. There's practically no learning curve.

- TurboFill™ feature lets you perform key on-line tasks, like opening Web sites and logging in, with just one or two clicks and no typing.
- The clean, graphical user interface helps you perform common tasks quickly.
- Using the look-up feature, you can locate records quickly without scrolling through the entire list.
- The preview pane shows you the details of the highlighted record without your having to open the account.

Safe. This password-protected application encrypts your personal identification information to keep it safe from prying eyes.

- Upon installation, choose any alphanumeric code you want as your password. Then, whenever you want to access your private information, simply click on the keypad or type in your password.
- TurboPasswords alerts you if someone has tried to log on to your software with an incorrect password.
- After three logon attempts with the incorrect password, TurboPasswords delays the next attempt by 10 seconds.

- Information stored in TurboPasswords is encrypted using the 128-bit Blowfish algorithm. This means that TurboPasswords offers reliable security against would-be thieves.
- You may also set TurboPasswords to time-out of sessions, should you walk away from your desk or get distracted with another project. This way, your personal information is not left in plain view on your desktop for anyone to see.

Organized. You don't have to be organized to use TurboPasswords. The software does it for you.

- Keep an alphabetized list of personal and business accounts in a single place. No more notes cluttering up your desk or wallet.
- Sort by category for fast, easy look-up.
- Choose from the 11 pre-defined templates that help you organize details related to your accounts.
 - o Credit cards
 - o Bank accounts
 - o Your favorite web sites
 - o System logons
 - o Valuable inventory or property
 - o Insurance policies
 - o Software licenses purchased
 - o Contacts
 - o Any other miscellaneous, sensitive data
- Or create your own templates, so you can record the information that is important to you.
- Print out records to keep a hard copy of vital information in other secure locations, like a safe deposit box.

Convenient. Having all your important access codes and account information at your fingertips is easier than digging through paper files.

- Private information about your personal or business life is always in the same place. Don't waste time trying to find it every time you need it.
- The software can automatically generate passwords so you get random, hard-to-guess codes.
- Preview pane shows each field for the selected account and includes URL hyperlinks to Web sites for immediate access.
- Integration with Internet Explorer toolbar offers quick access to Web sites and the ability to automatically fill in login user names and passwords using the TurboFill feature.
- Synchronize with any Palm Powered handheld for easy access anywhere (supports 5-way navigators and Graffiti 2).
- Print directly from TurboPasswords or export records to spreadsheets or text files and then print.
- Easily back up or share confidential information by exporting or e-mailing vPass files. As the creator of the vPass file, you assign a password that is used to encrypt the record(s) you selected and that must be entered by anyone wanting to decrypt the file. Contents of the vPass file are automatically added to the TurboPasswords database of the person opening the file.
- Avoid keeping multiple lists and re-typing the information into TurboPasswords. Instead, import data as csv files.

System Requirements

To use TurboPasswords software on a PC, you must have:

- Windows-compatible PC
- Windows® 98 or higher, or Windows 2000 or higher
- 16 MB RAM (32 recommended)
- 4 MB disk space

To also use TurboPasswords software on a handheld, you must have:

- A handheld device using the Palm OS software 3.5 or higher
- 80 KB free memory on the handheld
- Palm™ Desktop Software 3.0 or higher

Chapura software is made and supported in the U.S.A.
